

IDENTITY & ACCESS MANAGEMENT (IAM)

These days, entering a physical facility should be just as secure as logging onto an enterprise network or a cloud-based application. Security professionals often find themselves hard-pressed to secure both physical and logical assets (as well as comply with stringent government mandates) due to a variety of factors, including cost, complexity, organizational “silos”, and a plethora of physical and logical access control and identity management systems. However, organizations must maintain constant vigilance against threats that span both logical and physical assets, driving the need for a comprehensive Identity and Access Management (IAM) strategy and robust operational framework.

Intekras IAM Services ensure a client’s specific requirements and goals are viewed within an overall context of risk. We are able to design, implement, and operate an IAM solution that addresses both Physical and Logical Access Control Systems (PACS and LACS) and enables an enterprise-wide environment of trust, security, integrity, privacy, and availability. By providing this solution as a service, we allow customers to maintain a robust security posture, while reducing cost and risk, making it an enormously attractive alternative to conventional, in-house approaches. When properly deployed, a fully integrated IAM system will reduce administrative costs, improve monitoring and auditability, streamline user provisioning processes, and enforce a higher level of security.

“...we allow customers to maintain a robust security posture, while reducing cost and risk, making it an enormously attractive alternative to conventional in-house approaches.”

Through its IAM Services, which includes a comprehensive portfolio of identity management products through partnerships with leading PACS and LACS hardware and software providers, *Intekras* can provide operational solutions that integrate Logical IAM with Physical IAM. We support card registration, card management, revocation inquiry, cardholder access, and digital certificate validation, and can implement card production as well as ID Management System (IDMS) and Card Management System (CMS) functionality. From applicant registration through badging, *Intekras* maintains secure, compliant FIPS 201 approved credentialing, while also providing 24/7 monitoring and management of the IAM solution and various other end-to-end implementation and support services.

In summary, the *Intekras* IAM Services offering is a holistic approach to the creation and practical usage of credentials to ensure the security of people, facilities and assets. Our suite of solutions enables the creation of a system and infrastructure to establish personal identity, manage credential issuance and usage, and provide for integrated access to facilities and information assets.
